

UNDERSTANDING AND REDUCING THE ENERGY CONSUMPTION OF DISTRIBUTED SYSTEMS

Anne-Cécile Orgerie

IDCHP seminar
1st July 2021, Lyon

1

Outline

- Context
- Understanding the energy consumption
- Reducing the energy consumption
- Concluding broader remarks

2

Outline

- Context
- Understanding the energy consumption
- Reducing the energy consumption
- Concluding broader remarks

3

4

5

My scientific context

- Energy consumption
- Large-scale distributed systems
- Computing and networking parts
- Use phase

Started with Grid computing some years ago...

6

Energy efficiency: business as usual?

Computing faster?

Computing slower?

7

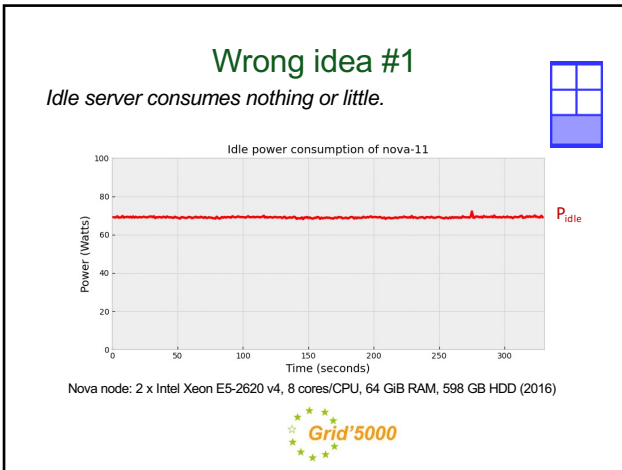

Energy efficiency: business as usual?

Computing faster?

Computing slower?

Temperature matters.

8

9

10

No chance for naive modeling

ON ON ON ON ON

$5 \times P_{idle} + 8 \times P_{VM} = X \text{ Watts}$

ON ON ON ON ON

$5 \times P_{idle} + 8 \times P_{VM} = X \text{ Watts}$

Best configuration for power consumption ?
It depends.

11

Outline

- Context
- Understanding the energy consumption
- Reducing the energy consumption
- Concluding broader remarks

12

Energy consumption: a complex phenomenon

Need for **wattmeters** and sound experimental campaigns

- To understand
- To build robust models
- To get solid instantiations
- To obtain realistic algorithms

13

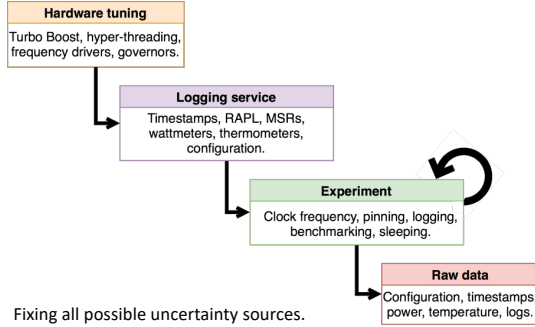

Reproducibility?

Idle power consumption varies over time.

14

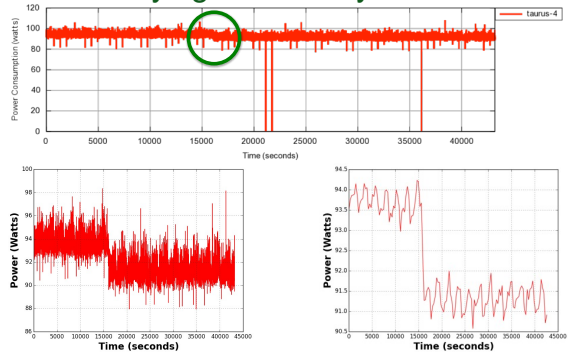

Methodology for measuring server consumption

Fixing all possible uncertainty sources.

15

Annoying uncertainty sources

16

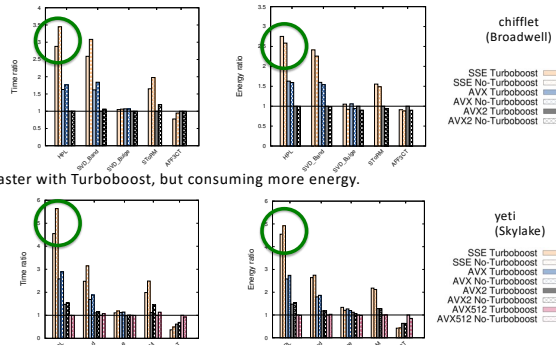

100% CPU utilization?

17% difference in consumption for applications fully loading the server.

17

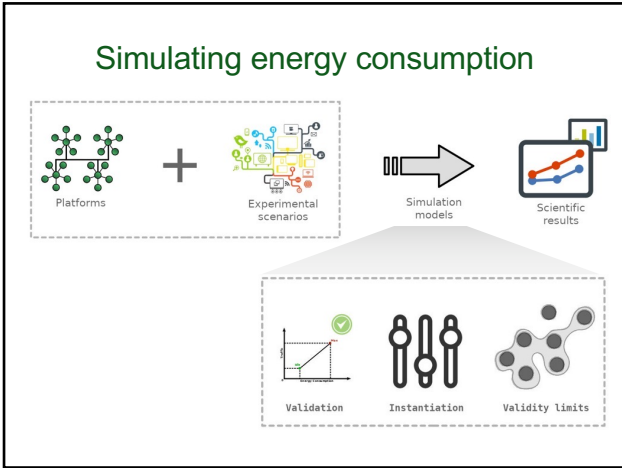

Faster or slower? ... It depends.

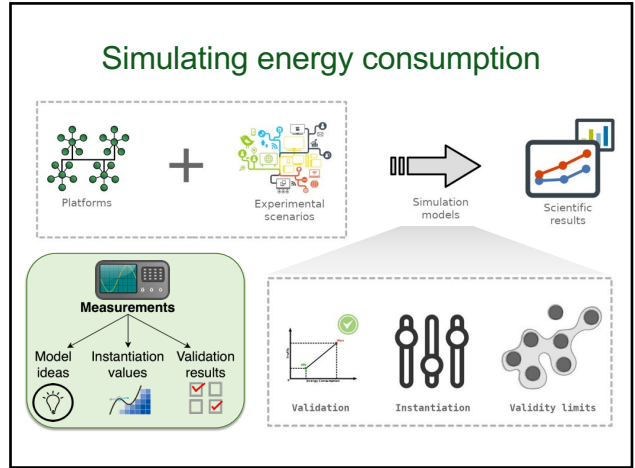

Faster with TurboBoost, but consuming more energy.

Faster with TurboBoost, and consuming less energy.

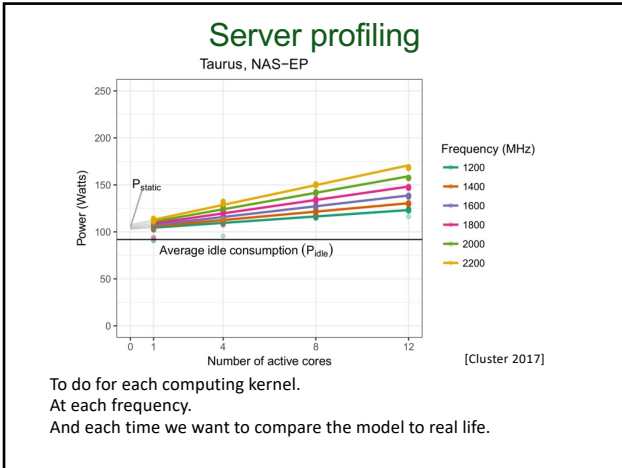

18

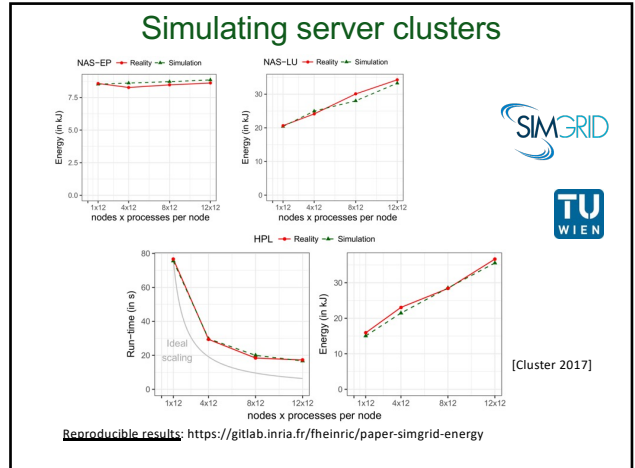

19

21

22

23

24

Models and simulation tools for what?

- Capacity and energy planning
- What-if scenarios
- Algorithm analysis
- Estimating VM energy consumption**
- Estimating end-to-end energy consumption**
- Closing doors

25

VM energy cost models

Identical VMs on heterogeneous servers

Outline

- Context
- Understanding the energy consumption
- Reducing the energy consumption
- Concluding broader remarks

31

Let's switch off unused resources

It takes time and energy.
It impacts electrical infrastructure and cooling system.

[CCPE 2018]

32

Let's consolidate the workload

Bin-packing problem.
Dynamic workload.

[Springer book chapter 2018]

33

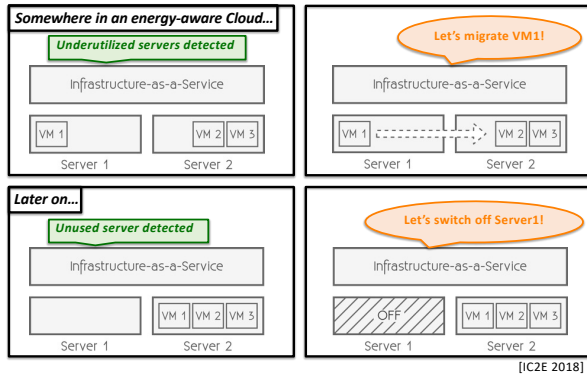

Let's migrate VMs for dynamic consolidation

[IC2E 2018]

34

Let's migrate VMs for dynamic consolidation

Questioning promises and uses

The Korea Herald
More than half a million 5G network users returned to 4G: report

By Shim Woo-hyun Published : Oct 7, 2020 - 17:24 Updated : Oct 7, 2020 - 17:24

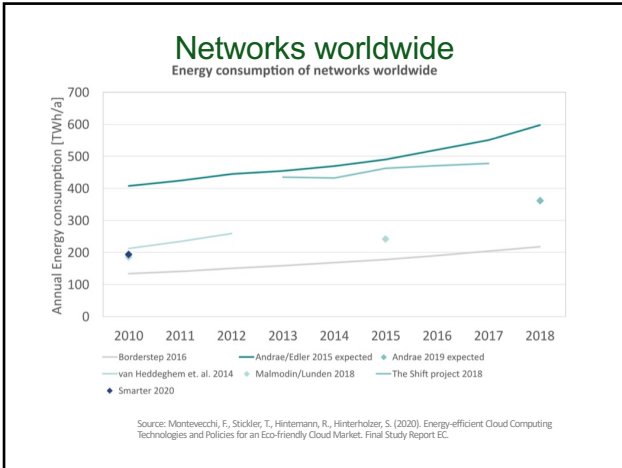

The number of 5G network users who returned to 4G network services has surpassed half a million – 562,656 users who downgraded from their 5G subscriptions – accounts for **6.5 percent of the total 5G network subscribers in South Korea**, according to the report by Rep. Hong Jung-min, who belongs to the Science, ICT, Broadcasting and Communications Committee at the National Assembly.

The lawmaker pointed out that many 5G users have gone back to the lower-speed network service as the **high-priced** new network system failed to offer quality **connection and coverage**.

50

51

52

53

54

What you can do

- Completely switch off unused devices**
- Remove unused applications
- Erase useless (old) emails, photos, etc.
- Be careful when sending emails (attachments, receivers)
- Be careful when coding (image size, active loops, etc.)
- Look at eco-labels when buying new equipment
- Keep devices longer if they are still working**
- Avoid capability overlap**
- Stay energy-aware...

55

Opportunities

- To think differently
- To propose new things
- To build differently
- To design a sustainable future

- Sobriety*
- Resilience*
- Low-tech*
- Sustainable computing*
- Computational sustainability*
